

Shaping visions, changing views

40 PORTMAN SQUARE, LONDON

## Prestigious office space is designed with fully glazed partitioning system

GMR Group opted for Ocula™ FS25 and FT105 fully glazed partitioning to help divide office and conferencing space in their London offices in Portman Square. Using a mixture of single and twin glazed design aesthetics; the demands for privacy were met by the use of switchable privacy glass, a precise privacy system that instantaneously changes glass from clear to opaque on the click of a switch.

Switchable privacy glass was chosen for the large meeting room in the main reception area. This was because of its ability to provide privacy without the use of blinds.

Ocula™ FS25 and FT105 is a fully glazed frameless partitioning system that combines aesthetics with outstanding fire and acoustic performances and is available in Single, 58mm Twin Glazed and 105mm Twin Glazed options.
